# Subject Index for
# Electronics and Communications in Japan, Part II, Volume 75, 1992

2-D IIR filter: **5**, 60-68
2-D IIR system: **9**, 51-60
3-D presentation: **10**, 54-65
4-FET set-reset flip-flop: **4**, 1-12
90-deg constant-phase function: **6**, 24-34
A-D converters: **6**, 1-13
A-stability: **3**, 84-91
A/D converter: **5**, 51-59
Abnormal convergence: **3**, 84-91
Acoustic lens: **1**, 87-100
Acoustic parameters: **12**, 35-47
Adaptive Robbins-Monro procedure: **4**, 101-110
Adaptive signal filters: **4**, 71-78
Adder: **2**, 47-58
Algebraic curve code: **4**, 40-49
Algorithms: **5**, 36-50; **6**, 93-105; **11**, 57-66
All-pass filter: **9**, 25-37
AND circuit: **2**, 47-58; **4**, 1-12
Analog circuit: **11**, 1-11
Analog circuit characteristics: **3**, 56-65
Analog LSI: **3**, 56-65
AR spectral estimation: **8**, 19-33
Arc-length method: **7**, 52-63
Artificial intelligence: **8**, 85-95
Artin conjecture: **8**, 108-114
Associative memory: **4**, 62-70
Associative memory problem: **5**, 51-59
Asynchronous iteration: **5**, 28-35
ATM network: **9**, 14-24
Autocorrelation analysis: **2**, 1-12
Autocorrelation function: **3**, 76-83
Autonomous circuit family: **7**, 87-96
Axiomatic tutoring functions: **8**, 85-95
Back-propagation algorithm: **1**, 9-19
Band-limit waves: **4**, 26-39
Bandpass filter: **6**, 74-84
Bandpass-limited waveform: **8**, 1-18
Basic software: **8**, 79-84
BDF curve-tracing algorithm: **7**, 52-63
Beta-partition: **12**, 21-34
Bifurcation: **9**, 61-72
Bifurcation equation: **2**, 92-106
Bilinear s-Z transformation: **3**, 66-75
Bilinear Z transform: **6**, 24-34
Biquad section: **6**, 74-84
Bit error rate: **8**, 96-107
Blackboard architecture: **4**, 79-91
Block-state realization of digital filters: **3**, 13-25; **11**, 88-101
Blowing-up method and transformations: **4**, 40-49
Bug model: **10**, 66-79
Buzz bar of voiced plosives: **7**, 74-86
CAD: **6**, 46-55
CAI: **9**, 103-113
Cartesian join operation: **1**, 31-41
Cartesian meet operation: **1**, 31-41
Cartesian product file: **1**, 20-30
Cascaded multistage autoregressive (AR) process: **8**, 34-54
Ceiling: **5**, 36-50
Cell: **5**, 82-95
Cell loss: **9**, 14-24
Channel coding: **12**, 82-95
Channel graph: **9**, 73-84
Chaos: **4**, 62-70; **7**, 87-96; **12**, 72-81
Chebyshev approximation: **6**, 24-34
Chebyshev filter: **6**, 74-84
Cilia: **6**, 85-92
Circuit analysis/circuit simulation: **7**, 52-63
Circuit constant optimization: **4**, 13-25
Circuit diagram: **5**, 82-95
Circuit synthesis: **7**, 11-22
Closed domain: **4**, 26-39
Cluster analysis: **1**, 31-41
CMOS LSI-oriented asynchronous sequential circuit: **4**, 1-12
CMOS memory: **7**, 97-110
CMOS transistor: **5**, 82-95
Code-word-length function: **11**, 12-20
Coded speech: **5**, 69-81
Coding distortion: **9**, 14-24
Coefficient quantization errors: **3**, 13-25
Coefficient sensitive analysis: **3**, 13-25
Compound system: **6**, 85-92
Computation error: **1**, 76-86
Computational graph: **6**, 93-105
Computer aided construction (CAI): **10**, 66-79
Computer algebra: **2**, 92-106
Computer-aided design: **7**, 97-110
Computer-aided instruction (CAI): **8**, 85-95; **11**, 46-56
Concurrent operation: **8**, 79-84
Constrained equation: **12**, 72-81

Contamination: **9**, 85-102
Control system design: **3**, 26-36
Convergence: **4**, 13-25; **5**, 28-35
Convex shape: **10**, 102-117
Curvature: **10**, 102-117
Curve-tracing method: **7**, 52-63
D-A converter: **6**, 56-73; **6**, 1-13
Decimation ratio: **10**, 1-12
Decimator: **2**, 81-91
Decomposition property: **3**, 92-101
Deductive inference: **11**, 34-45
Delay-free loops: **8**, 55-63
Dendrogram: **1**, 31-41
Design automation: **6**, 46-55
Design knowledge representation scheme: **6**, 56-73
Design method: **12**, 1-10
Design specifications: **3**, 26-36
Detector: **9**, 85-102
Device modeling: **7**, 97-110
Differential equations: **3**, 84-91
Digital control system: **6**, 1-13
Digital fibers: **2**, 59-72
Digital filters: **1**, 1-8; **2**, 13-24; **2**, 81-91; **12**, 1-10
Digital signal processing: **1**, 9-19; **2**, 59-72; **4**, 71-78; **4**, 92-100
Digital speech transmission: **9**, 14-24
Discrete Fourier transform: **1**, 76-86; **2**, 13-244; 92-100
Discrete Fourier transforms:
Discrete Hartley transform: **1**, 76-86
Discrete logarithm problem: **8**, 108-114
Disjoint disjunctive forms: **5**, 96-107
Distributed processing: **9**, 103-113
Domain model: **8**, 85-95
Duffing's equation: **9**, 61-72
Edge detection: **5**, 60-68
Edge emphasis: **5**, 60-68
Educational media: **10**, 54-65
Educational technology: **10**, 80-90
Efficacy: **9**, 85-102
Elementary terminal capacity matrix: **9**, 1-13; **12**, 21-34
Elimination: **9**, 38-50
Energy cascade process: **7**, 64-73
Environment file: **4**, 79-91
Error-correcting codes: **1**, 20-30; **4**, 40-49; **10**, 13-27; **10**, 28-40; **12**, 82-95
Error-free coding: **10**, 28-40
Estimation: **7**, 43-51
Euclidean division method: **10**, 1-12
EXPADF: **7**, 43-51
Exercise problem: **11**, 21-33
Expansion: **7**, 34-42
Expected polynomial-time algorithms: **8**, 108-114
Expert system: **6**, 56-73
Extended arc-length: **7**, 52-63
Exterior window problem: **5**, 1-14
Factor analysis: **5**, 69-81
Failure rate: **5**, 96-107
Fan filters: **1**, 1-8
Farthest-neighbor method: **1**, 31-41
Fast Fourier transform: **1**, 76-86
Fast Hartley transform: **1**, 76-86
Fault diagnosis: **11**, 1-11
Fault dictionary: **11**, 1-11
Fault tree analysis: **5**, 96-107
FIR filter: **1**, 1-8; **8**, 64-78; **12**, 1-10
Filter banks: **9**, 25-37
Filter round-off error: **2**, 59-72
Filter transformer: **1**, 1-8
Finite GB product: **6**, 74-84
Finite register length: **1**, 76-86
Finite two-dimensional real-number sequence: **7**, 34-42
Finite-element analysis: **1**, 87-100
Five-valued logic simulator: **3**, 1-12
Fixed-point arithmetic: **1**, 42-52
Fixed-point representation: **6**, 1-13
Floating-point arithmetic: **1**, 42-52
Floating-point representation: **6**, 1-13
Flow network: **9**, 1-13; **12**, 21-34
Flowchart-based graphic editor: **4**, 79-91
Flowmeter: **9**, 38-50
FM: **9**, 38-50
Focusing transducers: **1**, 87-100
Folding: **7**, 87-96
Formalization of teaching material: **9**, 103-113
Format frequencies: **11**, 102-113
Fornasini-Marchesini second model: **5**, 60-68
Forward-biased region: **3**, 47-55
Four-directional processing: **5**, 60-68
Fourier: **7**, 34-42
Fourier spectra: **1**, 101-110
Fractal turbulence vortex: **7**, 64-73
Frame synchronization: **12**, 82-95
Frequency estimation: **4**, 92-100
Frequency transformation: **2**, 81-91
FTE: **5**, 96-107
Functional simulation: **7**, 97-110
Fundamental period: **3**, 76-83
Fuzziness: **10**, 80-90
Fuzzy constraint: **3**, 26-36
Gauss-Newton method: **4**, 101-110
Gaussian noise: **8**, 34-54
Generalization of AR model: **12**, 59-71
Generation algorithm: **7**, 34-42

Generation function: **8**, 1-18
Global placement: **6**, 46-55
Graph theory: **9**, 1-13
Grid-free wiring: **3**, 56-65
Growth model: **3**, 37-46
H-Planar: **5**, 36-50
Hamming tertiary code: **10**, 13-27
Hasse-Weil bound: **4**, 40-49
Hazard detection: **3**, 1-12
Heart-rate variability: **2**, 107-116
Hierarchical embedding: **5**, 36-50
High frequencies and low power consumption: **8**, 64-78
High-speed filtering: **3**, 13-25
High-speed VLSI circuit: **5**, 15-27
Hilbert transform: **1**, 101-110
Hilbert transformer: **6**, 24-34
Hopf bifurcation: **2**, 92-106
Hopfield-type neural network: **2**, 47-58; **5**, 28-35; **5**, 51-59
Hush function: **1**, 20-30
Hysteresis: **9**, 61-72
IDT resonator: **11**, 77-87
Identification: **1**, 53-63
Identification: **1**, 64-75
IIR: **9**, 25-37
Image processing: **5**, 60-68
Image reconstruction from projections: **12**, 96-104
Image restoration: **1**, 9-19
Impedance simulation: **3**, 66-75
Impulsive noise: **8**, 96-107
Inductance simulation: **3**, 66-75
Inflation of pharynx cavity: **7**, 74-86
Information processing system: **11**, 57-66
Initial synchronization decoding model: **12**, 82-95
Input device: **8**, 79-84
Instructional design: **10**, 80-90
Integral geometry: **12**, 96-104
Integral transform: **12**, 96-104
Intelligent tutoring systems (ITS): **8**, 85-95; **10**, 66-79; **11**, 21-33; **11**, 34-45; 33
Interface builder: **4**, 79-91
Interpolation formula: **12**, 11-20
Interpolation function: **4**, 26-39; **8**, 1-18
Interpolator: **2**, 81-91
Intersymbol interference: **6**, 106-113
Interval analysis: **2**, 36-46
Iterated codes: **10**, 28-40
Ito stochastic differential equation: **3**, 37-46
Karhunen-Loeve expansion: **1**, 53-63; **1**, 64-75
Kevorkian decomposition technique: **2**, 36-46
Laminar sublayer: **7**, 64-73
Laplace transform: **4**, 50-61; **12**, 11-20
Layout: **6**, 46-55
LC oscillators: **7**, 87-96
Learning: **4**, 62-70
Learning support system: **9**, 103-113
Learning task sequence: **10**, 80-90
Least square approximation: **4**, 101-110
Least square estimation: **1**, 64-75
Line spectrum pair: **9**, 51-60
Linear antenna with nonlinear load: **6**, 35-45
Linear prediction analysis: **10**, 91-101
LMS/Newton: **7**, 43-51
LOGADF: **7**, 43-51
Logarithm: **7**, 43-51
Logic circuits: **3**, 1-12
Logical structure: **5**, 82-95
Love-type surface acoustic wave (SAW) resonator: **11**, 77-87
Low sensitivity: **9**, 25-37
Lowpass filter: **6**, 74-84
LPC analysis-synthesis: **11**, 102-113
LPC cepstrum: **3**, 102-110
LQ regulator: **3**, 26-36
Lumped series-resonant circuit: **7**, 23-33
Lyapunov-Schmidt method: **2**, 92-106
M-ary PSK: **5**, 108-119
M/G/1 system: **3**, 92-101
MAXIMIZE algorithm: **5**, 1-14
Management items: **4**, 79-91
Manhattan wire length: **6**, 46-55
Mathematical model: **10**, 80-90
Maximum weight window problem: **5**, 1-14
Maze method: **3**, 56-65
Mean time between failures (MTBF): **3**, 37-46
Measure for coefficient sensitivity: **3**, 13-25
Mental rotation: **10**, 54-65
Minimum coefficient sensitivity: **11**, 88-101
Minkowski metrics: **1**, 31-41
Mixed analog/digital design: **6**, 56-73; **7**, 97-110
MOS: **5**, 69-81
Model function: **4**, 13-25
Monolithic IC: **3**, 66-75
MSE: **2**, 25-35
Multi-inverted pendulum system: **6**, 85-92
Multidimensional signal processing: **4**, 26-39
Multifeedback circuit: **6**, 74-84
Multipath fading: **6**, 106-113
Multiplex transmission: **2**, 25-35
Multiplier: **2**, 47-58
Multistage instantaneous maximum entropy method: **8**, 34-54
Multivalued information processing system: **10**, 13-27
Multivariate statistical analysis: **12**, 48-58

Nearest-neighbor method: **1**, 31-41
Network synthesis: **9**, 1-13
Neural network: **1**, 9-19; **4**, 62-70; **5**, 28-35; **5**, 51-59; **12**, 1-10
Newton's method: **6**, 46-55
Next-generation circuit simulator: **5**, 15-27
Non-Gaussian nonlinear type: **12**, 59-71
Nonlinear circuit: **7**, 52-63
Nonlinear circuit equations: **6**, 35-45
Nonlinear differential equations: **6**, 35-45
Nonlinear digital filter: **1**, 9-19
Nonlinear equation: **6**, 93-105
Nonlinear equation solutions: **2**, 36-46
Nonlinear inductor: **12**, 72-81
Nonlinear mapping: **6**, 93-105
Nonlinear optimization: **6**, 46-55; **12**, 35-47
Nonlinear spread spectrum: **6**, 14-23
Nonlinear system: **1**, 53-63; **4**, 62-70; **6**, 35-45
Nonstrong unimodel: **9**, 85-102
Normalized ARMA lattice filters: **4**, 71-78
Numerical methods: **3**, 84-91; **5**, 28-35; **6**, 93-105
Object function: **4**, 13-25
Off-axis spectrum: **3**, 102-110
One-dimensional map: **12**, 72-81
One-hot code: **4**, 1-12
Optical communication: **10**, 28-40
Optimal control input: **3**, 26-36
Optimum cut angle: **2**, 73-80
Optimum filter: **2**, 25-35
Oscillator: **5**, 51-59; **12**, 11-20
Parallel algorithm: **5**, 28-35
Parallel cyclic-type circuit: **8**, 64-78
Parasitic capacitance: **3**, 66-75
Parasympathetic nervous system: **2**, 107-116
Paraunitary scattering matrices: **7**, 1-10
Partial match query: **1**, 20-30
Passband compensating filter: **10**, 41-53
Path-following method: **7**, 52-63
PET: **12**, 96-104
Peak enhancement method: **3**, 102-110
Peak overshoot: **3**, 26-36
Perfect reconstruction: **10**, 1-12
Performance bound on optical communication: **10**, 28-40
Performance function: **12**, 35-47
Phase approximation: **9**, 51-60
Piecewise-linear approximation: **3**, 47-55
Piezoelectric substrates: **2**, 73-80
Piezoelectric telephone set: **12**, 35-47
Piezoelectric transducer: **1**, 87-100; **11**, 67-76
Pilot signal: **5**, 108-119
Pipeline wave digital filters: **7**, 1-10
Pitch extraction: **2**, 1-12
Pitch extractor: **3**, 76-83
Pitch modification: **11**, 102-113
Pitch period: **3**, 76-83
Placement: **6**, 46-55
Placement algorithm: **5**, 82-95
Planar embedding: **5**, 1-14; **5**, 36-50
Planar graph: **5**, 36-50
Pole sensitivity: **6**, 74-84
Polynomial basis vector: **2**, 92-106
Polyphase filter: **9**, 25-37
Power efficient coding: **10**, 28-40
Power spectral analysis: **2**, 107-116
Power spectrum: **10**, 102-117
Powers-of-two coefficient: **2**, 81-91; **10**, 41-53
PPM (Pulse Position Modulation): **2**, 25-35
PQ-tree: **5**, 1-14; **5**, 36-50
Predictor-corrector algorithm: **7**, 52-63
Preisach model: **9**, 61-72
Presentation skill: **10**, 54-65
Problem generation and explanation: **11**, 21-33
Problem-solving knowledge: **8**, 85-95
Programming style: **11**, 57-66
Prolog: **6**, 56-73
Pseudo-random spread spectrum: **6**, 14-23
Pulse detection: **2**, 25-35
Pulse modulation: **2**, 25-35
QPSK signal: **8**, 96-107
Quadrant filter fan: **6**, 24-34
Quadratic assignment: **6**, 46-55
Quadrature mirror filter (QMF): **10**, 1-12
Quality evaluation: **5**, 69-81
Quartz crystal vacuum gauge: **7**, 64-73
Quartz LST-cut: **2**, 73-80
R-R intervals: **2**, 107-116
Race phenomenon: **3**, 1-12
Radiation from the lips, nostrils, and pharynx: **7**, 74-86
Reactance E section: **8**, 55-63
Reaction time: **10**, 54-65
Real-time processing: **3**, 76-83
Recursive algorithm: **4**, 101-110
Recursive least-square algorithm: **1**, 42-52
Relaxation method: **12**, 11-20
Representation of integers: **11**, 12-20
Residual: **10**, 91-101
Respiratory sinus arrhythmia: **2**, 107-116
Response time: **3**, 26-36
Reverse-biased region: **3**, 47-55
Rhombically weighted IDT resistor: **11**, 77-87
Rician fading: **5**, 108-119
Rise/fall (R/F) delay: **3**, 1-12
Robustness: **9**, 85-102
Robustness of noise: **3**, 102-110

Rough surface impedance: **7**, 64-73
Round-off operation: **6**, 1-13
Routing algorithm: **9**, 73-84
RRS: **10**, 41-53
Runge-Kutta method: **3**, 84-91
Sample points: **8**, 1-18
Sampling point placement: **4**, 26-39
Sampling rate: **2**, 81-91
Sampling theorem: **10**, 102-117
Scaling: **11**, 88-101
Scattering matrix factorization: **7**, 1-10
Selective fading: **6**, 106-113
Sensitivity: **9**, 38-50; **11**, 67-76
Separability: **6**, 93-105
Server replacement: **3**, 92-101
Set of periodic solutions: **9**, 61-72
Set-up: **3**, 92-101
Settling time: **3**, 26-36
Shannon construction of binary code: **11**, 12-20
Shared library function: **5**, 15-27
Sharp auto correlation function: **7**, 34-42
Sidelobe reduction: **12**, 48-58
Signal detection: **2**, 25-35
Signal estimation: **1**, 9-19
Signal-dependent noise: **2**, 25-35
Singular systems: **4**, 50-61
Sinusoidal inputs: **6**, 35-45
Sinusoidal signals: **8**, 19-33
Smoothing: **5**, 60-68
Software explosion: **4**, 79-91
Software reliability: **3**, 37-46
Solution-tracing method: **7**, 52-63
Sonar arrays: **12**, 48-58
Sound environment: **12**, 59-71
SPECT: **12**, 96-104
SPICE2 circuit simulators: **5**, 15-27
Spectral estimation method: **8**, 34-54
Spectrum norm: **7**, 43-51
Spectrum reforming method: **3**, 102-110
Speech analysis: **10**, 91-101
Speech recognition: **3**, 76-83; **3**, 102-110
Speech sounds and vibrations: **7**, 74-86
Speech-synthesis: **11**, 102-113
Speed recognition: **2**, 1-12
Spherical Fourier transform: **10**, 102-117
Spherical harmonics: **10**, 102-117
Spike filtering: **3**, 1-12
Stability: **9**, 51-60
State-space digital filters: **2**, 59-72; **11**, 88-101
State-space method: **7**, 11-22
Statistical analysis: **1**, 76-86
Steady-state analysis: **6**, 35-45
Step response waveform: **3**, 26-36
Stochastic approximation: **4**, 101-110
Stochastic differential equation: **3**, 37-46
Stopband-forming filter: **10**, 41-53
Structural boundlessness: **8**, 55-63
Structural importance: **5**, 96-107
Structure of functions: **6**, 93-105
Student model: **10**, 66-79
Student model: **11**, 34-45
Sub-band coding: **10**, 1-12
Subharmonic oscillation: **6**, 14-23
Surface acoustic wave devices: **2**, 73-80
Surface acoustic wave resonator: **11**, 77-87
Switch level simulation (SLS) method: **3**, 47-55
Switched capacitor: **3**, 76-83
Switched circuits: **4**, 50-61
Switched-capacitor (SC) circuit: **3**, 66-75; **8**, 64-78
Symbol error rate: **5**, 108-119
System-on-chip: **7**, 97-110
Systolic array: **1**, 42-52
T-cascaded structures: **7**, 1-10
Tangential planer polar coordinates: **10**, 102-117
Teaching strategy: **10**, 80-90; **11**, 46-56
Teaching task: **11**, 46-56q
Terminal capacity matrix: **9**, 1-13; **12**, 21-34
Ternary three-bit codes: **10**, 13-27
Thickness extensional mode transduction: **11**, 67-76
Three-dimensional shape: **10**, 102-117
Three-layer channel routing: **9**, 73-84
Time domain TCT: **5**, 108-119
Time series: **12**, 59-71
Time-frequency signal analysis: **1**, 101-110
Time-varying filters: **2**, 13-24
Time-varying lattice filter: **8**, 34-54
Timing error: **2**, 25-35
Top-down design: **6**, 56-73
Top-down programming: **11**, 57-66
Topological sort: **11**, 46-56
Transfer functions: **7**, 11-22; **7**, 1-10; **8**, 55-63
Transient behavior: **6**, 85-92
Transmission line: **7**, 23-33
Transmission quality: **9**, 14-24
Traveling salesman problem: **5**, 51-59
Trellis-coded modulation: **6**, 106-113; **8**, 96-107
Truncation number: **8**, 19-33
TTL network: **3**, 47-55
Tutoring strategy: **11**, 34-45
Two dimensional spectral analysis: **1**, 101-110
Two-dimensional complex exponential function: **7**, 34-42
Two-dimensional digital filters: **10**, 41-53
Two-dimensional systems: **9**, 51-60
UD factorization: **1**, 42-52
Ultrasonic devices: **11**, 67-76

Ultrasonic transducers: **12**, 48-58
Ultrasonics: **9**, 38-50
Universal code: **11**, 12-20
Vacation model: **3**, 92-101
Van der Pol equation: **2**, 92-106
Variable-parameter circuits: **7**, 11-22
Velocimeter: **9**, 38-50
Velum vibration: **7**, 74-86
Vertex-appending algorithm: **5**, 36-50
VLSI: **6**, 46-55
VLSI layout: **9**, 73-84
VLSI-oriented circuit: **4**, 1-12
Vocal tract: **11**, 102-113
Voice characteristics: **2**, 1-12
Voltage follower: **3**, 66-75
Volterra series: **1**, 53-63
Wave digital filters (WDFs): **8**, 55-63
Weighting coefficient matrix: **3**, 26-36
White noise: **8**, 19-33
Wigner distribution: **1**, 101-110
Wirability: **3**, 56-65
Wiring constraints: **3**, 56-65
Wiring grid subdivision: **3**, 56-65
World of algebra: **10**, 66-79
Zero derivatives: **7**, 23-33
Zero-knowledge proofs: **8**, 108-114
Zero-phase: **5**, 60-68
